21LEM202T — Unit 3, Session 5, SLO 1

Part A — Key Ideas (Recap)

- Society is families living together in a relationship of mutual fulfilment, with a common goal. The base of harmony in society is harmony in the family, whose base is harmony in the human being.
- The human goal: right understanding and right feeling (happiness) in every individual; prosperity in every family; fearlessness (trust) in society; and co-existence (mutual fulfilment) in nature/existence.
- The five dimensions / systems of society: (1) Education-Sanskar — education develops right understanding, sanskar is the commitment, preparation and practice for right living (including right skills and technology); (2) Health-Self-regulation; (3) Production-Work — work is the labour a human being does on the rest of nature, production is the physical facility obtained from it; (4) Justice-Preservation — justice is the recognition, fulfilment and evaluation of human-human relationship leading to mutual happiness, preservation is the same for the human-rest-of-nature relationship leading to mutual prosperity / enrichment; (5) Exchange-Storage — of physical facility with a view of mutual fulfilment, not obsession for profit, exploitation or accumulation.
- Production asks what to produce (the required physical facility) and how to produce (by a mutually enriching, cyclic / avartansheel process that is eco-friendly, while ensuring justice / people-friendly). This cyclic process is already going on in nature; we have to update man-made processes to be cyclic and mutually enriching.
- Resource depletion = a resource is used at a rate faster than the rate at which nature produces it. Pollution = the product either does not return to nature's cycle, or is produced faster than it can return to the cycle.
- Process of development: in an environment of relationship (imitate → follow → obedience/discipline → self-verification → self-discipline → self-confidence) the next generation is more developed; in an environment of domination (→ arbitrariness / manmani, revolt) the next generation may be less developed. The scope is from family order to world family order (universal human order).

This section is a recap of key ideas; no blanks or questions to fill. The student is expected to read and understand the content.

Part B — In-Class Activity

Activity 1 — Name the five dimensions

Complete each dimension with its pair.

- 1. Education – **Right Living**
- 2. Health – **Self-regulation**
- 3. Production – **Work**
- 4. Justice – **Protection**
- 5. Exchange – **Storage**

Activity 2 — The human goal

Fill the four parts of the human goal.

- In every individual: **Happiness (eudaimonia)**
- In every family: **Prosperity**
- In society: **Right understanding and right feeling**
- In nature / existence: **Coexistence (mutual fulfilment)**

Activity 3 — Resource depletion or Pollution?

Mark each statement as Resource Depletion or Pollution.

Statement	Depletion / Pollution
A resource is used faster than nature produces it	**Resource Depletion**
The product does not return to nature's cycle	**Pollution**
The product is produced faster than it can return to nature's cycle	**Pollution**

Part C — Long-Answer Questions

Q1. State the human goal in its four parts. [5]

The human goal has four parts: 1) In every individual: happiness (eudaimonia) – the state of being in harmony with oneself and with others. 2) In every family: prosperity – the feeling of having more than enough physical facilities. 3) In society: right understanding and right feeling – the foundation for harmony and justice. 4) In nature/existence: coexistence – the mutual fulfilment and cyclic relationship between all entities.

Q2. Name and briefly explain the five dimensions / systems of society. [5]

The five dimensions of society are: 1) Education – the system that imparts right understanding and right feeling. 2) Health – the system that ensures self-regulation and a healthy body-mind complex. 3) Production – the system that produces physical facilities using nature's resources in a sustainable way. 4) Justice – the system that ensures protection of rights and harmony in relationships. 5) Exchange – the system that facilitates the storage and distribution of goods and services in a mutually beneficial manner.

Q3. What is a mutually enriching, cyclic (avartansheel) process? Define resource depletion and pollution. [5]

A mutually enriching, cyclic (avartansheel) process is one in which every entity in nature gives and takes in a way that sustains the cycle, ensuring that nothing is wasted and everything returns to the cycle. Resource depletion is the overuse of a resource faster than nature can replenish it, leading to its exhaustion. Pollution is the introduction of substances or products that do not return to nature's cycle, causing harm to the environment and living beings.

Q4. Contrast the process of development in an environment of relationship with that in an environment of domination. [5]

In an environment of relationship, development is based on mutual respect, trust, and understanding, leading to harmony and sustainable progress. In an environment of domination, development is based on power, control, and exploitation, leading to conflict and unsustainability. The former fosters cooperation and well-being for all, while the latter creates inequality and long-term harm.

Q5. What is the common goal of your family or organisation, and how does it map to the human goal? How can you contribute to right understanding and right feeling in your neighbourhood? [5]

The common goal of my family is to live happily and prosperously while maintaining harmony with each other and with nature. This maps to the human goal by ensuring happiness in every individual, prosperity in the family, right understanding and right feeling in society, and coexistence with nature. I can contribute to right understanding and right feeling in my neighbourhood by practicing and promoting respectful communication, helping others in need, and engaging in community activities that foster mutual trust and cooperation.

Self-Reflection (Take-Home)

• How much of your imagination is about the naturally acceptable human goals and how to move from the present society to a human society, and how much is about the problems of the present society and how to manage in it? (Slide 10)

- Is the goal of your family or organisation, and how to achieve it, discussed periodically? (Slide 43)
- I spend about 60% of my imagination on naturally acceptable human goals and how to achieve them, and 40% on current problems and management. I try to focus more on solutions and positive change.
- Yes, the goal of my family is discussed periodically, especially during family meetings, and we review our progress and adjust our actions accordingly.
