21LEM202T — Unit 3, Session 6, SLO 2

Part A — Key Ideas (Recap)

●. ● The universal human order is the human goal fulfilled for all, from family order to world family order: family → family cluster → village → village cluster/city → nation → world family. At each level, the five dimensions operate.

The universal human order is the human goal fulfilled for all, from family order to world family order: family → family cluster → village → village cluster/city → nation → world family. At each level, the five dimensions operate.

●. ● A single dimension operates at many levels. For health-self-regulation, for example: individual (lifestyle, exercise), family (intake, daily routine), family cluster (postures, regulation of breath), village (medicine), village cluster/city (health education, environment, labour, treatment), nation (proliferation of good practices), world (humane culture, civilisation, tradition).

A single dimension operates at many levels. For health-self-regulation, for example: individual (lifestyle, exercise), family (intake, daily routine), family cluster (postures, regulation of breath), village (medicine), village cluster/city (health education, environment, labour, treatment), nation (proliferation of good practices), world (humane culture, civilisation, tradition).

●. ● Behaviour and Work are the two ways the human being interacts outward. The return of behaviour (with human beings) is right understanding, right feeling and right thought, leading to mutual happiness. The return of work (with the rest of nature) is physical facility, leading to mutual prosperity — prosperity of the human being and enrichment, protection and right utilisation (preservation) of the rest of nature.

Behaviour and Work are the two ways the human being interacts outward. The return of behaviour (with human beings) is right understanding, right feeling and right thought, leading to mutual happiness. The return of work (with the rest of nature) is physical facility, leading to mutual prosperity — prosperity of the human being and enrichment, protection and right utilisation (preservation) of the rest of nature.

●. ● Four kinds of production: primary (physical facility for nurturing, protecting and rightly utilising the body — food, clothes, shelter); secondary (to facilitate primary production); tertiary (to facilitate production, services and behaviour — train, TV, mobile); and services (to facilitate any of the above). Their priority order is to be examined.

Four kinds of production: primary (physical facility for nurturing, protecting and rightly utilising the body — food, clothes, shelter); secondary (to facilitate primary production); tertiary (to facilitate production, services and behaviour — train, TV, mobile); and services (to facilitate any of the above). Their priority order is to be examined.

●. ● Developmental economics: take-take economics (dominate / exploit; feeling of opposition; both maximise their share — with undefined needs and 'limited' resources everyone is bound to be deprived); give-take economics (indifferent or opposition); and give-give economics (both work for mutual fulfilment and enrichment; feeling of relationship — identify the needs, produce more than required by a cyclic, mutually enriching process, so resources are more than required and every family can be prosperous).

Developmental economics: take-take economics (dominate / exploit; feeling of opposition; both maximise their share — with undefined needs and 'limited' resources everyone is bound to be deprived); give-take economics (indifferent or opposition); and give-give economics (both work for mutual fulfilment and enrichment; feeling of relationship — identify the needs, produce more than required by a cyclic, mutually enriching process, so resources are more than required and every family can be prosperous).

●. ● An undivided society is one in which there is the feeling of relationship in all, for all; a universal human order is one in which the human goal is fulfilled for all, generation after generation.

An undivided society is one in which there is the feeling of relationship in all, for all; a universal human order is one in which the human goal is fulfilled for all, generation after generation.

Part B — In-Class Activity

Activity 1: Match each level to its program, as given in the deck.

Level	Program
Individual	**Health-self-regulation**
Family	**Health-self-regulation**
Family cluster	**Health-self-regulation**
Village	**Health-self-regulation**
Nation	**Health-self-regulation**
World	**Health-self-regulation**

Activity 2: Mark each item as Primary, Secondary, Tertiary or Services.

Item	Type of production
Food, clothes, shelter	**Primary**
Physical facility used to facilitate primary production	**Secondary**
Train, TV, mobile	**Tertiary**
Tractor maintenance, software for mobile	**Services**

Activity 3: Mark each description as Take-Take, Give-Take or Give-Give.

Description	Type
Feeling of opposition; both maximise their share; everyone is bound to be deprived	**Take-Take**
Feeling of indifference or opposition	**Give-Take**
Feeling of relationship; both work for mutual fulfilment and enrichment; every family can be prosperous	**Give-Give**

Part C — Long-Answer Questions

Q1. What is the scope of the societal systems? List the levels from family order to world family order. [5]

The scope of societal systems covers the entire human society, from the smallest unit of family to the global level. The levels are: family order, family cluster order, village order, nation order, and world family order.

Q2. Explain how a single dimension (for example health-self-regulation) operates at various levels from the individual to the world. [5]

Health-self-regulation at the individual level means each person maintains physical and mental health through proper diet, exercise, and self-discipline. At the family level, it involves creating a healthy environment and supporting each member's well-being. At the family cluster and village levels, it includes community health programs, sanitation, and collective health awareness. At the nation level, it requires public health policies, healthcare infrastructure, and disease prevention. At the world level, it involves global health cooperation, pandemic response, and equitable access to healthcare for all.

Q3. Distinguish the four kinds of production with an example of each. [5]

Primary production involves extracting or producing natural resources directly, e.g., farming, fishing, mining. Secondary production transforms raw materials into finished goods, e.g., manufacturing clothes from cotton. Tertiary production provides services that support the other sectors, e.g., transportation, banking, education. Services are intangible activities that facilitate production and daily life, e.g., maintenance, software development, healthcare.

Q4. Distinguish take-take, give-take and give-give economics. [5]

Take-take economics is based on opposition and self-interest, where each party tries to maximize their own share, leading to deprivation for all. Give-take economics involves indifference or opposition, where exchanges are conditional and may not ensure mutual benefit. Give-give economics is based on relationship and mutual fulfilment, where both parties work for each other's prosperity and enrichment, leading to sustainable well-being for all.

Q5. What is the common goal of your family? Sit with your family and discuss the goal, the program for it, and the participation of each member. [5]

The common goal of my family is to ensure the physical, emotional, and spiritual well-being of all members, and to contribute positively to society. Our program includes regular family meetings, shared meals, mutual support in education and careers, and community service. Each member participates by taking responsibility for household chores, supporting each other's goals, and maintaining open communication.

Self-Reflection (Take-Home)

●. What is required for justice at each level — family, neighbourhood, institution, city, district, state, nation, world? (Slide 22)

Justice at each level requires the recognition of the inherent worth of every individual and the fulfilment of mutual relationships. At the family level, it requires love, respect, and trust among members. At the neighbourhood and institution levels, it requires fairness, transparency, and accountability. At the city, district, state, and nation levels, it requires equitable laws, policies, and access to resources. At the world level, it requires global cooperation, respect for human rights, and sustainable development.

●. What is the common goal of the organisation you belong to, and how does it map to the human goal? (Slide 34)

The common goal of my organisation (e.g., a university) is to provide quality education and foster holistic development of students. This maps to the human goal of happiness and prosperity by equipping individuals with knowledge, skills, and values to lead fulfilling lives and contribute to society. The organisation's programs, such as curriculum, research, and community engagement, are designed to support the physical, mental, and social well-being of all stakeholders.
