21LEM202T — Unit 3, Session 9, SLO 1

Part A — Key Ideas (Recap)

1. ● Through socially relevant projects and internships, teachers and students develop a holistic perspective — a life of social participation and connectedness with the family, society and nature, a shift from self-centredness. They experience people who are living examples making effort in this direction, collect and understand relevant data, and take a step toward a humane society.

This is a key idea, not a question. No answer required.

2. ● Any project or activity taken up must reinforce right understanding. For example, tree plantation reinforces right understanding when it is done with the understanding that the human being can live with nature in a mutually fulfilling manner, ensuring right utilisation, protection and nurturing of the trees. If tree plantation is done only to get respect, press coverage or a tick mark on an activity sheet, then it has not been understood and is not worth doing.

This is a key idea, not a question. No answer required.

3. ● Projects are taken up in the five dimensions: 1-Education-Sanskar, 2-Health-Sanyam, 3-Production-Work, 4-Justice-Suraksha and 5-Exchange-Storage; each connects to the four human goals — right understanding in every human being, prosperity in every family, fearlessness (trust) in society, and co-existence with nature/in existence.

This is a key idea, not a question. No answer required.

4. ● There are three types of project: type 1 — study; type 2 — model / prototype; and type 3 — implementation. Examples: a study of food-grain produced, consumed and wasted (which shows production is more than the need, so the problem is mindset and assumptions, not production); a 'Red Carpet Society', the opposite of ragging (justice); rainwater harvesting such as 'Sourabha' (entirely on rainwater since 1994); and the Yuktahar cooperative mess.

This is a key idea, not a question. No answer required.

5. ● The role of the teacher is that of a facilitator — to develop an environment of trust, affection and guidance, to place the right proposals before students, to give time and opportunity to explore and verify on their own right, and to respond with responsibility — so that the process leads to self-exploration and understanding.

This is a key idea, not a question. No answer required.

Part B — In-Class Activity

Activity 1: Match each example project to its dimension (1-Education-Sanskar, 2-Health-Sanyam, 3-Production-Work, 4-Justice-Suraksha, 5-Exchange-Storage).

Run an evening class on a topic for the local community → 1-Education-Sanskar

Find out the quality of air and water in your village / house → 2-Health-Sanyam

Find out how much food is cooked, consumed and wasted in your hostel mess → 3-Production-Work

Plan a 'Red Carpet Society', the opposite of ragging → 4-Justice-Suraksha

Optimise the supply chain for mess vegetables to cut distance and time → 5-Exchange-Storage

Example project	Dimension
Run an evening class on a topic for the local community	**1-Education-Sanskar**
Find out the quality of air and water in your village / house	**2-Health-Sanyam**
Find out how much food is cooked, consumed and wasted in your hostel mess	**3-Production-Work**

Example project	Dimension
Plan a ‘Red Carpet Society’, the opposite of ragging	**4-Justice-Suraksha**
Optimise the supply chain for mess vegetables to cut distance and time	**5-Exchange-Storage**

Activity 2: Mark each example as type 1 (study), type 2 (model/prototype) or type 3 (implementation).

Study the awareness about health-sanyam in your community → Type 1 (study)

Run an evening class for the local community → Type 3 (implementation)

Make your campus self-sufficient on renewable energy (biogas, solar…) → Type 3 (implementation)

Develop a prototype of a pedal-driven generator → Type 2 (model/prototype)

Example	Type 1 / 2 / 3
Study the awareness about health-sanyam in your community	**Type 1 (study)**
Run an evening class for the local community	**Type 3 (implementation)**
Make your campus self-sufficient on renewable energy (biogas, solar…)	**Type 3 (implementation)**
Develop a prototype of a pedal-driven generator	**Type 2 (model/prototype)**

Activity 3: Choose one dimension and outline a small socially-relevant project that reinforces right understanding, making your own role visible.

- Dimension: **Health-Sanyam** | Type (study / model / implementation): **study**
- What I will do, and how it reinforces right understanding:
- My role in it:

What I will do, and how it reinforces right understanding: I will conduct a survey in my neighbourhood to understand people's daily routines, food habits, and health issues. This reinforces right understanding by helping me and others see the connection between our lifestyle choices and our well-being, and by identifying gaps in awareness that can be addressed through education.

My role in it: I will design the survey, collect and analyse the data, and present the findings to the community, also organising a small awareness session based on the results.

Part C — Long-Answer Questions

Q1. What is the purpose of socially relevant projects and internships? [5]

The purpose of socially relevant projects and internships is to provide students with practical exposure to real-life situations, enabling them to apply their theoretical knowledge for the welfare of society. They help in developing a sense of responsibility, empathy, and right understanding of human values, and they prepare students to contribute meaningfully to society while also gaining professional skills.

Q2. What is the essential criterion that any project must satisfy? Explain with the tree-plantation example. [5]

The essential criterion is that the project must reinforce right understanding and be in harmony with the natural and social order. For example, a tree-plantation project must not just be about planting trees for show; it must ensure that the right species are planted in the right places, that they are cared for, and that the community understands the importance of trees for the environment. This way, the project promotes right understanding and sustainable living.

Q3. Name the five dimensions in which projects can be taken up, and the four human goals they connect to. [5]

The five dimensions are: 1) Education-Sanskar, 2) Health-Sanyam, 3) Production-Work, 4) Justice-Suraksha, and 5) Exchange-Storage. They connect to the four human goals: Right Understanding, Prosperity, Fearlessness (Suraksha), and Co-existence (with nature).

Q4. Distinguish the three types of project (study, model/prototype, implementation), with one example of each. [5]

Study projects involve research and analysis to understand a situation or problem, e.g., studying the awareness about health-sanyam in a community. Model/prototype projects involve creating a working model or prototype to test an idea, e.g., developing a pedal-driven generator. Implementation projects involve putting a solution into practice in the real world, e.g., running an evening class for the local community.

Q5. Propose one socially relevant project you could undertake — state its dimension, type, and how it reinforces right understanding (and your role in it). [5]

I propose a project in the dimension of Education-Sanskar, type study. I will conduct a survey in my locality to understand the level of awareness about moral values and ethical living among youth. This reinforces right understanding by identifying gaps in value education and suggesting ways to address them. My role is to design the survey, collect responses, analyse the data, and present findings to the community, and also to organise a workshop on value education based on the findings.

Self-Reflection (Take-Home)

• For any project you take up, check: does it reinforce right understanding, or is it being done for respect, press coverage or a tick mark? (Slide 13)

• How can your college Value Education Cell focus teacher and student activity on understanding, through meetings, workshops and socially relevant projects? (Slides 52–53)

• I will ensure that my project is driven by the genuine intention to understand and help, not by the desire for recognition or external validation. I will regularly reflect on my motives and the impact of my actions.

• The Value Education Cell can organise regular meetings where teachers and students share their experiences and insights, conduct workshops on human values and right understanding, and encourage socially relevant projects that address real community needs. This would create a culture of learning and service, rather than just completing tasks.
