21LEM202T — Unit 4, Session 2, SLO 1

Part A — Key Ideas of the Session

• Every order has a definite ACTIVITY — Physical: Formation–Deformation; Bio: Respiration ('-' + respiration); Animal: in the body, plus Selecting–Tasting in I; Human: in the body, plus Imaging, Analysing–Comparing, Selecting–Tasting in I, and Natural Acceptance / Potential for Understanding in I.

• Every order has a definite NATURAL CHARACTERISTIC (participation in the larger order) — Physical: Composition–Decomposition; Bio: Nurture–Worsen; Animal: Cruelty, Non-cruelty in I; Human: Potential for Perseverance, Bravery, Generosity in I. (Except for the human being without right understanding — who has to understand in order to live in accordance with their natural characteristic.)

• Every order has a definite INNATENESS / self-organisation — Physical: Existence; Bio: Growth; Animal: Will to live in I; Human: Will to live with continuous happiness in I, with Right Feeling & Thought and Right Understanding. (Every unit is naturally self-organised except the human being without right understanding, who has to understand to be self-organised.)

• Every order has a definite INHERITANCE (how conduct is decided and maintained generation after generation) — Physical: Constitution-based; Bio: Seed-based; Animal: Breed-based; Human: Education-Sanskar based.

• Role of education-sanskar: the conduct of the human being is decided by its education-sanskar. Human education-sanskar → human conduct; inhuman education-sanskar → inhuman conduct. This is carried to the next generation.

• Natural characteristic of human living with HUMAN consciousness: Perseverance (being assured that the all-encompassing solution is to understand and live in harmony at all four levels), Bravery (commitment to help the other develop right understanding), Generosity (readiness to invest oneself, one's body and physical facility to help the other).

• Tendency of human living with ANIMAL consciousness: Wretchedness ('I cannot take care of my body, so I become dependent on the other'), Cunningness ('… so I beguile the other'), Cruelty ('… so I resort to force and violence').

• Participation of the human being in entire nature = Preservation (enrichment, protection and right utilisation) of nature AND prosperity / fulfilment of human needs in a manner that preserves nature — by protecting its innateness, protecting and enriching its inheritance, and making right utilisation in line with its activity (or at least not violating their innateness, inheritance or activity).

• Human participation for mutual fulfilment, order by order — Physical: facilitate its existence and maintain/ensure its constitution (e.g. constitution of earth). Bio: facilitate its growth and maintain/ensure its seed (e.g. seed of rice). Animal: facilitate care of its body and ensure its will to live; maintain/ensure its breed (e.g. breed of cow). Human: facilitate care of the body and facilitate its will to live with continuous happiness by ensuring human education-sanskar and participating in developing/maintaining an undivided society and universal human order.

• Sum up: there is a relationship of mutual fulfilment (harmony) inherent among the four orders. The role of the human being is to understand that it is inherent (we do not have to create it) and to live accordingly.

The key ideas are summarized as follows: Each of the four orders (Physical, Bio, Animal, Human) has a definite activity, natural characteristic, innateness, and inheritance. The human being's conduct is determined by education-sanskar, which can be human or inhuman. Human consciousness leads to perseverance, bravery, and generosity, while animal consciousness leads to wretchedness, cunningness, and cruelty. Human participation in nature is for mutual fulfilment, preserving nature and fulfilling human needs by protecting innateness, inheritance, and making right utilisation. The human role is to understand the inherent harmony and live accordingly.

Part B — In-Class Activity

Activity B1: Fill in the definite entry for each cell from the session (Innateness = self-organisation; Inheritance = how conduct is maintained generation after generation).

Order	Innateness (self-organisation)	Inheritance
Physical	**Self-organisation**	**Based on physical laws, maintained by natural forces**
Bio	**Self-organisation**	**Based on genetic material, maintained through reproduction**
Animal	**Self-organisation**	**Based on genetic material and instincts, maintained through reproduction**
Human	**Self-organisation (to be achieved through right understanding)**	**Based on education-sanskar, maintained through tradition and practice**

Activity B2: Match each natural characteristic / tendency to its meaning as given in the session.

Perseverance → Being assured that the all-encompassing solution is to understand and to live in harmony at all four levels, and living with this commitment without perturbation.

Bravery → The commitment to help the other develop right understanding and to live accordingly.

Generosity → Readiness to invest oneself, one's body and physical facility to help the other develop right understanding.

Wretchedness → 'I cannot take care of my body, hence I resort to being dependent on the other.'

Cunningness → 'I cannot take care of my body, hence I resort to beguiling the other.'

Cruelty → 'I cannot take care of my body, hence I resort to force and violence.'

Term	Meaning	Your match
Perseverance	Being assured that the all-encompassing solution is to understand and to live in harmony at all four levels, and living with this commitment without perturbation.	**Perseverance**
Bravery	The commitment to help the other develop right understanding and to live accordingly.	**Bravery**
Generosity	Readiness to invest oneself, one's body and physical facility to help the other develop right understanding.	**Generosity**
Wretchedness	'I cannot take care of my body, hence I resort to being dependent on the other.'	**Wretchedness**
Cunningness	'I cannot take care of my body, hence I resort to beguiling the other.'	**Cunningness**
Cruelty	'I cannot take care of my body, hence I resort to force and violence.'	**Cruelty**

Part C — Long-Answer Questions

Q1. For each of the four orders, state its Inheritance, and explain what 'inheritance' means in this context. (5 marks)

Physical order: inheritance is the maintenance of its properties and behaviour through physical laws, passed on by the natural forces. Bio order: inheritance is the transmission of genetic material from parents to offspring, ensuring continuity of species. Animal order: inheritance is the transmission of genetic material and instincts, enabling animals to carry out their activities. Human order: inheritance is the transmission of education-sanskar (values, understanding, and culture) from one generation to the next. In this context, inheritance means how the conduct and characteristics of each order are maintained and passed on from generation to generation.

Q2. "The conduct of the human being is decided by its education-sanskar." Explain this, distinguishing human

education-sanskar from inhuman education-sanskar, and relate it to the human being's natural characteristic and innateness. (5 marks)

Human conduct is not fixed by genetics but is shaped by education-sanskar, which includes the values, beliefs, and habits acquired through upbringing and learning. Human education-sanskar leads to right understanding, harmony, and self-organisation, expressing natural characteristics like perseverance, bravery, and generosity. Inhuman education-sanskar leads to disharmony, exploitation, and animal-like tendencies such as wretchedness, cunningness, and cruelty. The human being's natural characteristic is to live in harmony at all four levels, and its innateness is self-organisation, which is achieved through right education-sanskar that aligns with this natural characteristic.

Q3. Describe how the human being participates in the entire nature for mutual fulfilment. What do 'preservation' and 'prosperity' involve, and how should the human being relate to the innateness, inheritance and activity of each order? (5 marks)

The human being participates in nature by understanding the harmony at all four levels and acting to fulfil the needs of each order, ensuring mutual fulfilment. Preservation involves maintaining the natural balance and supporting the existence of all orders, while prosperity involves enriching the physical and bio orders through right utilisation. The human being should respect the innateness (self-organisation) of each order, not interfere with its inheritance (natural transmission), and align its activity with the natural activity of each order, using resources responsibly without violating their inherent nature.

Self-Reflection (Take-Home)

• Look at one choice you made recently. Did your conduct express the natural characteristic of human consciousness (perseverance, bravery, generosity) or a tendency of animal consciousness (wretchedness, cunningness, cruelty)?

• Identify one unit each of the physical, bio and animal order that you use, and one way you can make 'right utilisation' of it without violating its innateness, inheritance or activity.

• Can you see that every order has a definite activity, natural characteristic, innateness and inheritance — and that only the human being (without right understanding) is the exception that must work to become self-organised?

Recently, I chose to help a friend with their studies even though I had my own deadlines. This expressed generosity, as I invested my time to support another's development. I use a mobile phone (physical), a plant in my room (bio), and a pet dog (animal). For right utilisation, I can use the phone for learning and not waste resources, care for the plant by watering it appropriately, and treat the dog with kindness and respect its natural needs. Yes, I can see that every order has a definite activity, natural characteristic, innateness, and inheritance, and only the human being without right understanding is the exception that must work to become self-organised.
