21LEM202T — Unit 5, Session 6, SLO 1

Part B — In-Class Activity

Activity 1: Complete the four steps from the lecture.

Step	Name of step	Main focus
1	**Individual Transformation**	Self-exploration / individual transformation
2	**Mass Awareness**	Mass awareness towards holistic development
3	**Humanising Mainstream Education**	Humanising mainstream education
4	**Holistic Living Models**	Models for holistic living in institution / community

Activity 2: Match each step to its meaning.

Step	Meaning / practice
Value Education	Incorporating values, harmonious living examples and practice in skill development
Value-Based Education	**Restructuring the entire education system to be founded on right understanding and values**
Value-Based Living	**Living daily life in accordance with the values and harmony understood through education**

Activity 3 – Personal Transition Plan

Write one practical change at each level.

Level	Present practice / issue	Value-based change
Individual	**I often waste time on social media**	**Set a daily limit of 30 minutes and use the saved time for self-study**
Family / relationship	**I rarely listen patiently to my parents**	**Spend 15 minutes daily in attentive conversation with family members**
Institution / profession	**I focus only on grades, not on learning**	**Study each subject to understand its value in human welfare**
Nature / community	**I throw waste without segregating it**	**Start composting organic waste and reduce plastic use**

Part C — Long-Answer Questions

1. Explain the core message of Lecture 28 in your own words. (5 marks)

The core message of Lecture 28 is that human beings are fundamentally co-existence of self (consciousness) and body (material), and that harmony at all levels — individual, family, society, and nature — is the natural and ultimate goal of human life. It emphasizes that right understanding of this co-existence leads to fulfillment, while ignorance causes conflict and unhappiness. The lecture urges us to verify this through our own natural acceptance and move from animal consciousness (based on sensation) to human consciousness (based on right understanding and mutual fulfillment).

2. Why is transition from animal consciousness to human consciousness essential? (5 marks)

The transition from animal consciousness to human consciousness is essential because animal consciousness is driven solely by physical sensations, instincts, and short-term gratification, which leads to conflict, exploitation, and unhappiness at all levels. Human consciousness, on the other hand, is based on right understanding, self-restraint, and the ability to live in harmony with others and nature. Without this transition, humans cannot achieve lasting happiness, mutual trust, or a sustainable society, and they remain trapped in a cycle of competition and fear.

3. Explain the three steps: value education, value-based education and value-based living. (5 marks)

Value education is the process of understanding what is truly valuable for human life — it involves self-exploration and verifying values through natural acceptance. Value-based education is the integration of these values into the formal education system, where every subject is taught with the aim of developing right understanding and holistic development. Value-based living is the practical application of these values in daily life — making decisions, behaving, and working in a way that ensures harmony at all levels, from individual to nature.

4. Prepare a short personal plan for moving towards value-based life and profession. (5 marks)

My personal plan includes: (1) Daily self-reflection for 10 minutes to check my thoughts and actions against natural acceptance. (2) In family, I will practice respectful listening and share responsibilities without expectation. (3) In my profession (engineering), I will choose projects that serve society and the environment, not just profit. (4) I will reduce consumption, reuse resources, and participate in community service. (5) I will continuously study and discuss universal human values with peers to strengthen my understanding.

Self-Reflection (Take-Home)

Which part of transformation is most urgent for you: thought, behaviour, work or participation?

What one practice can you start immediately for value-based living?

How can your professional knowledge support universal human order?

Thought is the most urgent transformation for me, because all actions and behaviours originate from thought. If I correct my thinking first, everything else will follow naturally.

I can start immediately by **practicing mindfulness for 5 minutes every morning**, observing my thoughts and aligning them with values like respect and responsibility.

My professional knowledge in **computer science** can support universal human order by developing affordable, accessible technology for education and healthcare, and by designing systems that respect user privacy and reduce environmental impact.
